

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.0358

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Please amend the claims as follows:

1. **Canceled**
2. **(Currently Amended)** The method of claim 19 + wherein the solution to the system design problem includes facilities whereby coherent sales, training, electronic learning or marketing campaigns are efficiently generated to web-based and other clients.
3. **(Previously Presented)** The method of claim 2 wherein the solution to the system design problem includes facilities whereby transaction processing and execution are monitored and captured for adding data to a target customer's profile
4. **(Currently Amended)** The method of claim 19 + wherein the framework is a formalized framework for supporting assessment of needs, and planning and implementing of content management solutions.
5. **(Previously Presented)** The method of claim 4 wherein the formalized framework is used to guide discussions about desired capabilities of the desired content management and delivery system.

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.00358

6. **(Previously Presented)** The method of claim 5 wherein through the use of this formalized framework and associated processes and considerations, a meaningful content management is developed and a set of process considerations required for this definition of content management is provided.
7. **(Previously Presented)** The method of claim 5 wherein through the use of this formalized framework and associated processes and considerations, an assessment of business capabilities to be supported is made.
8. **(Previously Presented)** The method of claim 7 wherein through the use of this formalized framework and associated processes and considerations, an effective design solution is achieved including an assessment of available products and services.
9. **(Currently Amended)** A system for use in designing a coordinated content management and delivery system comprising:
 - an associated logic mechanism for obtaining information indicative of a client environment;
 - a first logic mechanism for determining key considerations related to the a client environment, the key considerations comprising: what combination of channels and related devices are to be supported and what content related processes are needed to support publishing;

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.00358

a second logic mechanism for determining key processes for use in developing a solution to a system design problem, the system design problem being the determination of what content management and delivery products and processes to implement, and how to implement them, wherein the key processes comprise:

workflow tracking for content elements, wherein the workflow tracking for content elements includes tracking for review status and access privileges,

capture and use of at least one customer's user preferences, wherein the at least one customer's user preferences include an access record associated with user preferences,

application of business rules to user preferences to determine future content development, wherein the application of business rules to user preferences includes input templates for input characteristics of content elements and display templates for display characteristics of content elements,

access control for the content management system, wherein the access control of content management includes access control for creating, reading, updating, deleting, and approving content elements, and

metadata capture including author, date of creation and topic, wherein the metadata capture includes a taxonomy having one or more fields for categorizing content elements and corresponding keyword values for the one or more fields;

and

applying these key considerations and processes to the system design problem with the assistance of a framework showing basic content management and delivery element

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.03358

relationships to provide personalized content for a customer, wherein the framework includes a content delivery system and a content development and management system connected to the content delivery system, whereby such a solution to the system design problem is produced, and wherein the personalized content is in accordance with the at least one customer's user preferences and at least one business objective; and

a third logic mechanism that delivers the personalized content to the customer by selecting a delivery channel from a plurality of delivery channels in accordance with the at least one customer's user preferences and by distributing the personalized content over the selected delivery channel;

a fourth logic mechanism that receives planning input at the a content development and management system from a planning unit and processes the planning input at the content development and management system to determine planning output and content elements;

a fifth logic mechanism that receives the planning output at the planning unit from the content development and management system;

a sixth logic mechanism that receives content elements at the content delivery system from the content development and management system and assembles the content elements at the content delivery system to determine customer output and

a seventh logic mechanism that receives the customer output at the customer unit from the content delivery system.

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.0358

10. **(Previously Presented)** The system of claim 9 wherein the solution to the system design problem includes computer based facilities whereby coherent sales, training, electronic learning or marketing campaigns are efficiently generated to web-based and other clients.
11. **(Previously Presented)** The method of claim 10 wherein the solution to the system design problem includes computer based facilities whereby transaction processing and execution are monitored and captured for adding data to a target customer's profile.
12. **(Previously Presented)** The system of claim 9 wherein the framework is a formalized framework for supporting assessment of needs, and planning and implementing of content management solutions.
13. **(Previously Presented)** The system of claim 12 wherein the formalized framework is used to guide discussions about desired capabilities of the desired content management and delivery system.
14. **(Previously Presented)** The system of claim 13 wherein through the use of this formalized framework and associated processes and considerations, a meaning of content management is developed and a set of process considerations required for this definition of content management is provided.

Amendment dated 07/06/05
In Response to OA mailed 04/07/05

U.S.S.N. 09/626,100
005222.03358

15. **(Previously Presented)** The system of claim 13 wherein through the use of this formalized framework and associated processes and considerations, an assessment of business capabilities to be supported is made.
16. **(Previously Presented)** The system of claim 15 wherein through the use of this formalized framework and associated processes and considerations, an effective design solution is achieved including an assessment of available hardware and software products and services.
17. **Canceled**
18. **Canceled**
19. **(Previously Presented)** ~~The method of claim 18~~ A method for designing a coordinated content management and delivery system comprising the acts of:
obtaining information indicative of a client environment;
determining by computer key considerations related to the client environment, the key considerations comprising: what combinations of channels and related devices are to be supported and what content related processes are needed to support publishing;
providing by computer key processes for use in developing a solution to a system design problem, the system design problem being the determination of what content

005222.03358

management and delivery products and processes to implement, and how to implement them, wherein the key processes comprise:

workflow tracking for content elements, wherein the workflow tracking for content elements includes tracking for review status and access privileges, capture and use of at least one customer's user preferences, wherein the at least one customer's user preferences include an access record associated with user preferences,

application of business rules to user preferences to determine future content development, wherein the application of business rules to user preferences includes input templates for input characteristics of content elements and display templates for display characteristics of content elements,

access control for the content management system, wherein the access control of content management includes access control for creating, reading, updating, deleting, and approving content elements, and

metadata capture including author, date of creation and topic, wherein the metadata capture includes a taxonomy having one or more fields for categorizing content elements and corresponding keyword values for the one or more fields;

applying by computer these key considerations and processes to the system design problem with the assistance of a framework showing basic content management and delivery element relationships to provide personalized content for a customer, wherein the framework includes a content delivery system and a content development and management system connected to the content delivery system, whereby such a solution to

Amendment dated 07/06/05

005222.0358

the system design problem is produced, and wherein the personalized content is in accordance with the at least one customer's user preferences and at least one business objective;

receiving planning input at the a content development and management system from a planning unit;

processing the planning input at the content development and management system to determine planning output and content elements;

receiving planning output at the planning unit from the content development and management system;

receiving content elements at the content delivery system from the content development and management system;

assembling content elements at the content delivery system to determine customer output;

receiving customer output at the customer unit from the content delivery system;

and

delivering the personalized content to the customer, further comprising:

selecting a delivery channel from a plurality of delivery channels in accordance with the at least one customer's user preferences; and

distributing the personalized content over the selected delivery channel.
